

# PHISHING SIMULATION PLATFORM

Phishing simulations are a fast and efficient way to measure employees' vulnerability while ramping up awareness of the seriousness of risks. Use our powerful platform to bolster employees' detection skills and instill cybersecurity best practices within your organization.

**Convert staff worldwide, follow progress and see permanent behavioral change.**

## Key Features

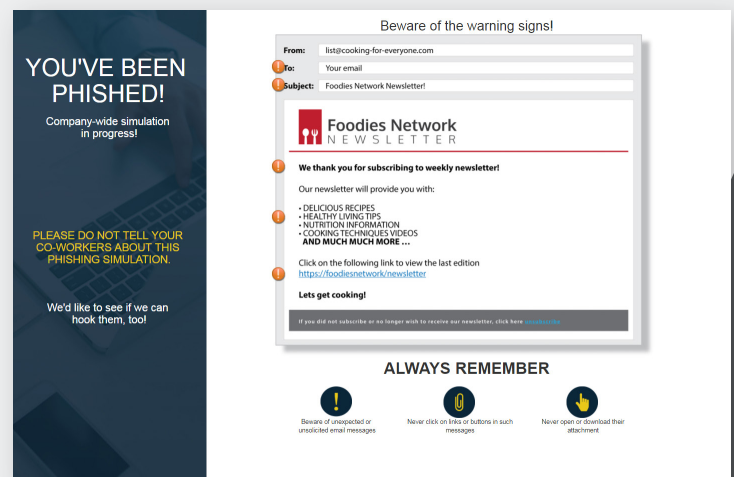

- **Simple and intuitive** browsing
- **Wide selection** of completely customizable templates, landing pages and learning materials
- Off-the-shelf, easily **customizable scenarios and scalable simulations** based on the most common threats (data entry, file attachment, double barrel, ransomware, business email compromise (BEC) and more)
- Monthly **feature updates and additional scenarios**
- **Automated and randomized** phishing
- Detailed **reporting** and real-time dashboards
- Multilingual and multicultural content available in **40 languages**
- **Dedicated support**

## Key Benefits

- **Measure** your organization's vulnerability
- **Assess** your level of exposure to different types of risks
- **Train employees** on how to identify and handle fraudulent emails in real time
- Change their behaviors and **instill a culture of security**
- **Eliminate risk** and make staff your strongest line of defense
- **Provide** escalating levels of simulations
- **Protect** valuable data
- **Mitigate** your compliance, fraud and reputational risks

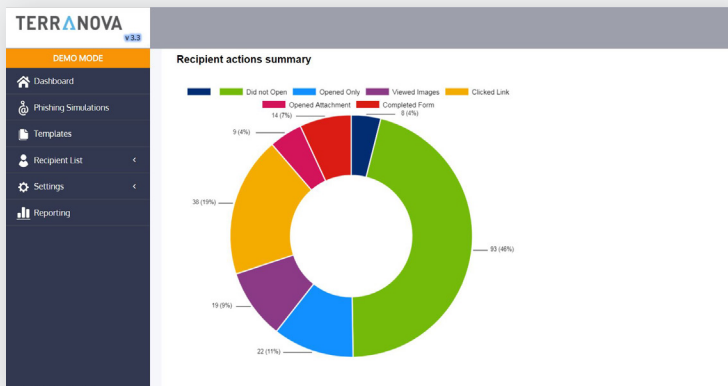

## JUST-IN-TIME TRAINING

Combine the learning potential of phishing with just-in-time training. **Instantly redirect users to a learning page or to a URL link with the appropriate training material related to the behavior you want to improve.** Choose from our wide selection of e-learning (90) and micromodule (50) topics to deepen learning and make sure information security best practices are well established.

# DETAILED DASHBOARDS AND CUSTOMIZABLE REPORTS

Visualize your campaigns' results at once with our easy-to-read dashboards. **Key data are provided to let you know the percentage of users who reported, did not open the email, opened only the email, viewed images, clicked links, opened attachments or completed forms.** The phishing platform reports are fully customizable and contain graphical information regarding each simulation. Results can be viewed by country, division, department or any other additional parameters. Compare results between different locations, simulations over time and more.

Report name	Description	Download PDF	Download Excel
Global recipient list	View all recipients within your company		
Simulation comparison	Report compares the recipient events for multiple simulations		
Simulation results	General report of all recipients and their actions in one active or completed simulation		
Simulation results - by filter	The result of one active or completed simulation displayed by filter		
Simulation results - events log	Report of recipient events in one active or completed simulation		
Repeat offenders	Report shows recipients who have failed multiple simulations. <i>Anonymous simulations are not included</i>		
Superstars	Report shows recipients who have been in multiple simulations, but have not failed any. <i>Anonymous simulations are not included</i>		
Browser report	Report shows a list of browsers used during simulation		
Platform(DS) report	Report shows a list of platform(DS) used during simulation		

# NEED HELP SETTING UP YOUR SIMULATION?

A multidisciplinary team will guide you through every step to ensure the success of your campaign.

- Development of phishing strategies
- Creation of new scenarios
- Customization services
- Phishing simulation management

**Don't wait until an incident occurs to raise awareness about phishing and information security. Change the culture and measure your organization's vulnerability with Terranova's phishing simulation platform. Train employees on how to identify and handle fraudulent emails in real time, and change their behaviors!**
